

Print Inspection II with SK-2

The system

The system Print Inspection II with SK-2 is an inline vision system for automatic print inspection. It consists of a mini-PC vision system and the sensor head SK-2.

- Examination of different labels
- Transport speeds up to 1600m / min

Features

The system inspects in freewheel whether the imprint is present in the desired quality. Interfaces to the printer or to communicate the line speed is not necessary. The systems can be easily integrated into the production line.

- Automatic one click teach mode
- No interfaces required to the production line
- System also suitable as a mobile solution

Customer benefits

- Scrap reduction due to immediate alerting
- Print inspection from a distance
- Facilitates the printer setup
- Increase in product quality
